

1. first created the GitHub repo locally, adding all the .git files
2. copied the starter code from [getbootstrap.com](https://getbootstrap.com) and used it as a template for the html
3. added the form and validation methods in the `myscript.js` file
4. altered the html file to have multiple required pages
5. updated the css page with necessary elements to render the html
6. added `home.html` to fit the project needs
7. committed the local repo to GitHub
